Norbert M. Seel:

**PSYCHOLOGY OF LEARNING**
Textbook für Educationalists and Psychologists

(Psychologie des Lernens
Lehrbuch für Pädagogen und Psychologen)

Publication date: May 2000
416 pages, 55 illustrations, 17 tables
numerous exercises, hardcover
List Price: Euro 39,-
ISBN: 3-8252-8198-1 (UTB-L)

About the book:
What's going on in a pupil, trying to solve an exercise or understanding a subject and keeping it in mind? There are several psychological disciplines which pursue this question. The psychology of motivation for example deals with interests, the wish to succeed and the fear of failing. The social psychology analyses the influence of the social context in family, school and society. The cognitive psychology and the psychology of memory study human memory, thinking and solving of problems.
The present book gives a vivid and clear introduction into the psychological theories of learning and teaching. It focuses on cognitive psychology with its current results and
demonstrates practical conclusions for the didactic organization. The didactic arrangement facilitates working with the book through clear recapitulations, a glossary, tasks and hints to further literature.

From the content:
Processes of learning and thinking:
Associative, importance creating learning.
Formation of concepts. Inferential learning.
Procedural learning, metacognitival learning
Learning results: constructions and changes of cognitive structures. Learning as a change of motivation. Learning as changes of values and morality
